# VISITOR & PARKING MANAGEMENT

Access Control, Client Tracking & Secure Premises

Smart technology gives legal firms more control over security at their premises and the movement of clients into and through the building. From the moment they enter the boom gate to the time they leave, the entry and exit times and duration of their stay are logged, enabling efficient real-time billing.

Itec's intelligent security solution for visitor access and tracking includes boom gates with access control, facial recognition and ANPR cameras for automated access, plus bullet and PTZ CCTV surveillance with customised AI and analytics for a streamlined client experience and secure premises.

CCTV Camera with AI & Analytics
